CISC122 – Computer Science II
Lab # 3

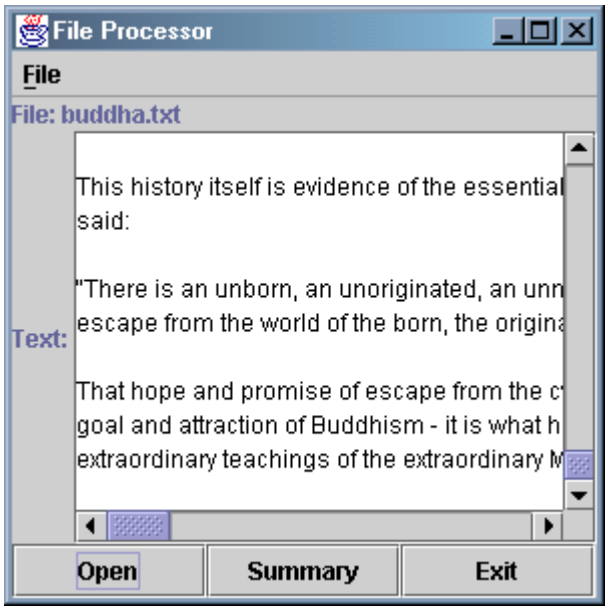

Specifications

Design a GUI-based file processing application using the following artifacts as a guide. The application will open an existing text file and display its contents. When the OPEN button is pushed, the user is prompted for a file name and if the file is not found, an error is displayed. A summary of the number of lines contained in the file can be displayed by pushing the SUMMARY button. Dialog boxes are used for data entry, summary displays, error messages, and program termination.
